Available for onsite, hybrid or remote work in Jordan; international work remotely from Jordan.

PROFESSIONAL SUMMARY

Independent GIS and remote sensing analyst delivering client projects since 2022, with a civil engineering background. Processes satellite imagery, integrates spectral and structural evidence, and produces thematic maps and technical reports for mineral exploration. Focuses on identifying promising areas for field verification and communicating findings in Arabic and English.

TECHNICAL SKILLS

Tools: ArcGIS, ENVI, QGIS, PCI Geomatica, SNAP.

Analysis: Multispectral and SAR imagery; Sentinel-2 and ASTER; band ratios; principal component analysis (PCA); minimum noise fraction (MNF); lineament extraction; Random Forest; change detection.

Deliverables: Exploration target maps, satellite image comparisons, thematic mapping and technical reports.

Additional workflows: AI-assisted Python scripting and deep learning.

PROFESSIONAL EXPERIENCE

Independent Remote Sensing & GIS Analyst | Self-employed | Jan 2022 - Present

- Deliver satellite imagery processing, spatial analysis, mapping and reporting for international mineral exploration projects.
- Combine alteration indicators and structural interpretation to prioritize prospective areas for further investigation.
- Prepare maps and technical explanations tailored to client requirements, including Arabic and English reports.

SELECTED PORTFOLIO PROJECTS | 2022 - 2026

Mauritania - Integrated Mineral Exploration Assessment: Combined spectral analysis, PCA/MNF, geological and geophysical evidence, and terrain/structural interpretation to prioritize exploration targets.

Sudan - Gold Exploration and Satellite Data Integration: Analyzed Sentinel-2 and ASTER imagery with band ratios, PCA and MNF to map hydrothermal alteration indicators and areas for field verification.

Saudi Arabia - Gold Prospectivity: Interpreted iron oxide and hydroxyl-bearing alteration indicators from Sentinel-2 imagery; prepared Arabic and English reports.

Ghana - Exploration Mapping: Produced spectral interpretation maps and bilingual reports for mineral exploration in a vegetated study area.

SELECTED TRAINING & CERTIFICATES | JANUARY 2026

- **NASA ARSET:** Hyperspectral Data for Land and Coastal Systems.
- **Esri:** Processing SAR Data in ArcGIS Notebooks; Extracting Features with Deep Learning Using ArcGIS Online; Getting Started with Imagery and Remote Sensing.
- **EO College:** Basic Principles of Radar Backscatter; Introduction to Machine Learning for Earth Observation.
- **GEO University:** Coordinate Reference Systems, Projections, and Spatial Data Representation.

EDUCATION & ENGINEERING TRAINING

Bachelor of Civil Engineering | Yarmouk University | 2020

Field Training Engineer | Directorate of Public Works, Irbid | Jul - Nov 2017

LANGUAGES

Arabic: Native. English: Reading, writing and listening; intermediate spoken communication.
