EDUCATION

2012 - 2020

YARMOUK UNIVERSITY, JORDAN

Bachelor of Civil Engineering

SKILLS

- Mineral Exploration
- Fault Extraction
- GIS Data Fusion
- SAR / Radar Remote Sensing
- GPS Surveying
- ArcGIS Pro
- Spectral Unmixing
- Multispectral Analysis
- Anomaly Detection
- ENVI
- QGIS

LANGUAGES

- Arabic (Native)
- English (Intermediate)

BASHAR ALASOULI

CIVIL ENGINEER | REMOTE SENSING SPECIALIST

PROFILE

Civil Engineer and Remote Sensing Specialist with 10 years of experience in multispectral and radar satellite analysis for minerals exploration. Delivered field-validated predictive targets across Sudan, Saudi Arabia, Mauritania, Oman, and Ghana. Holder of recent NASA ARSET and EO College certifications in satellite systems.

WORK EXPERIENCE

Independent Remote Sensing Analyst & Consultant

Self-Employed (2015 -present)

- Mapped hydrothermal alteration zones (iron oxides, clays, gossans) for gold, copper, and chrome.
- Produced commercial prospectivity maps and exploration reports for high-potential areas.
- Applied change detection (2015-2025) to reveal buried deposits under sand cover and monitor mining expansion.

Site Engineer

Khaled Al-Bustanjy & Partners Co. (Jan 2021 - Dec 2021)

- Supervised on-site construction activities, ensuring compliance with engineering drawings, specifications, and safety standards.
- Conducted daily site inspections, quality control checks, and progress monitoring.
- Coordinated with subcontractors, laborers, and consultants to resolve technical issues and maintain project schedules.

KEY ACHIEVEMENTS

- Successfully predicted and isolated a blind VMS gold target using remote sensing technologies in Sudan's Ariab Mineral District, the site was later confirmed with six active mining operations starting late 2024/early 2025, demonstrating strong predictive capability.
- Completed advanced professional training in 2026 (NASA ARSET, EO College, Durham University), including hyperspectral imaging, SAR/radar applications, machine learning for Earth Observation, and archaeological remote sensing
- Analyzed and processed thousands of satellite scenes independently, producing custom spectral products and anomaly maps that directly informed drilling prioritization and exploration strategy.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- NASA ARSET: Fundamentals of Remote Sensing
- NASA ARSET: Hyperspectral Data for Land and Coastal Systems
- NASA ARSET: Developing Sustainable Earth Science Applications – Modules 1, 2, 3
- EO College: Introduction to Machine Learning for Earth Observation
- EO College: Beyond the Visible – Imaging Spectroscopy for Forest Applications
- EO College: Basic Principles of Radar Backscatter
- EO College: Understanding SAOCOM – Argentine L-band SAR Satellite
- EO College: Winter-Water-Warming: Canadian SAR Applications
- EO College: Land in Focus series (Urban Spaces, Agriculture & Food, etc.)
- Durham University / British Council / FutureLearn: Advanced Archaeological Remote Sensing (English & Arabic versions)

KEY PROJECTS

- Predictive VMS Gold Targeting – Ariab Belt, Sudan (2025): Multi-temporal Sentinel-2 analysis identified blind deposit years before surface mining; site now hosts 6 active operations.
- Hydrothermal Alteration Mapping – Asir Terrane, Saudi Arabia: Sentinel-2 + ASTER integration to detect gossans and argillic/phyllic zones analogous to Al-Hajar mine.
- Chromite & IOCG Prospecting – Oman & Mauritania: VNIR/SWIR band ratios and radar data for ultramafic-hosted deposits near known producers.
- Orogenic Gold Alteration – Ashanti Belt, Ghana: Vegetation-masked multispectral analysis in tropical environment.
- Multi-Country Change Detection (2015–2025): Revealed buried anomalies under sand cover and monitored mining impacts in Sudan, Saudi Arabia, and Mauritania.
