PROFESSIONAL PROFILE

Remote sensing analyst and civil engineering graduate with approximately ten years of self-directed learning and practical project work in satellite imagery analysis. Delivers mineral exploration analyses and technical reports for international clients. Uses ArcGIS, ENVI, QGIS, PCI Geomatica and SNAP to process imagery, investigate spectral patterns and produce maps that support exploration targeting.

TECHNICAL SKILLS

Software: ArcGIS, ENVI, QGIS, PCI Geomatica, SNAP.

Methods: Multispectral and SAR analysis, band ratios, principal component analysis (PCA), minimum noise fraction (MNF), structural lineament extraction, Random Forest and change analysis.

AI-assisted workflows: Python scripting and deep learning with AI assistance.

Outputs: Mineral prospectivity maps, satellite image comparisons and technical reports in Arabic and English.

PROJECT EXPERIENCE

Independent Remote Sensing Analyst | International Client Projects | 2022 - 2026

- Delivered predominantly paid mineral exploration projects for international clients, including satellite image processing, spatial analysis and reporting for gold, copper and chromite targets.
- Applied spectral enhancement and structural analysis to map alteration indicators and prioritize areas for further investigation.
- Prepared visual interpretations, thematic maps and technical explanations tailored to client study areas.
- Identified gold and copper exploration targets in Sudan and South Africa supported by laboratory results from samples linked to target coordinates; personally reviewed the laboratory reports.

SELECTED PROJECTS COMPLETED BETWEEN 2022 AND 2026

Gold Exploration and Satellite Data Integration | Sudan

- Processed Sentinel-2 and ASTER imagery using band ratios, PCA and MNF to investigate hydrothermal alteration indicators and potential exploration targets.
- Prepared maps and reports comparing historical and recent imagery in the Ariab district.

Gold Prospectivity Analysis | Southwestern Saudi Arabia

- Analyzed Sentinel-2 imagery to highlight iron oxide and hydroxyl-bearing alteration indicators and documented findings in Arabic and English reports.

Gold Exploration Mapping | Eastern Ghana

- Produced spectral interpretation maps and bilingual reports examining alteration indicators associated with mineral exploration in a vegetated study area.

EDUCATION AND ENGINEERING TRAINING

Bachelor of Civil Engineering | Yarmouk University | Graduated 2020

Field Training Engineer | Directorate of Public Works, Irbid | July - November 2017

PROFESSIONAL DEVELOPMENT AND LANGUAGES

Completed GIS, remote sensing and surveying courses; certificates available.

Arabic: Native. English: Reading, writing and listening skills; speaking requires further practice.
